INSPECTION, ENGINEERING AND DESIGN

At the start of any project our API certified aboveground storage tank inspectors will provide inspection and consultation services to ensure compliance with applicable codes and standards.

Each tank upgrading project has specific requirements and presents unique challenges. We will work with you to ensure project safety, tank integrity, and the best utilization of resources and materials. A complete engineering analysis will be performed to ensure that tank components will not be overstressed during lifting and remedial operations. Cyntech's professional engineers will develop project-specific drawings and procedures, and will supervise each stage of the work.

Cyntech can provide complete turnkey service packages, including all aspects of inspection, engineering and construction for any tank modifications. Cyntech also offers customized service packages to suit the specific needs of our clients.

OUR TECHNOLOGY

Cyntech utilizes a unique airbag lifting system to elevate the tank from its base to allow for remedial action. Our system offers tremendous advantages over conventional hydraulic jacking methods, including:

- Tank Integrity is Maintained
- Only minimal Excavation is Required
- No Concrete Support System is Required
- No Welding is Required on Tank Shell

TANK LIFTING AND REMEDIATION

Cyntech will analyze your situation, recommend the appropriate remedial action and execute the required repair work. Our services include tank lifting, leveling, repair or replacement of roofs and floors, shell repairs and reconstruction of foundations. Cyntech can also upgrade your storage tanks to meet stringent environmental standards by installing release prevention barriers and leak detection.

TANK RELOCATION

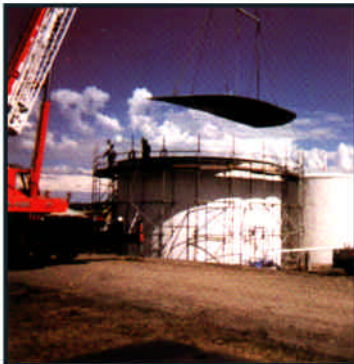

Significant cost savings can be realized through the relocation of existing tanks when compared to the expense of new tankage construction. Cyntech's trained crews can provide complete tank relocation services on land or via navigable waterways.

THE RIGHT SERVICE

Cyntech will provide the right service for all your tankage needs, from structural to environment upgrading - with the skilled personal and specialized technology required to ensure your project is completed safely and efficiently. Our team is performance driven and dedicated to serving the needs of our clients.
